The Problem

We move fast. Shouldn't our money?

When you can get anywhere in the world in less than 24 hours, it's time your money can too. Today's interconnected global economy demands a faster and better banking infrastructure, that is unburdened by costly, opaque and outdated systems.

The Solution

The new path forward

Using the latest in distributed ledger and tokenization technology, Eternic creates a new pathway forward where global transactions can flow securely in real-time - saving you and your customers time and money.

- **Faster**
- **Safer**
- **Less expensive**

A Smarter Settlement System

Our stable interbank transfer mechanism is tied to fiat currency and works in tandem with existing financial systems to reduce cost by improving efficiency, transparency, and risk management.

Reduces risk-related overhead

Eternic eliminates the dependency on correspondent banks to mitigate counterparty and settlement risk, allowing transactions to occur faster and fees to be reduced to an average cost of \$0.003 per transaction

Streamlines governance

Introduces uniformity in the transfer of currencies, enabling all participants immediate access to all the data for status, oversight and reconciliation. In addition to platform specific governance rules, it is possible to apply local regulations to every transaction, assuring that appropriate governance is satisfied.

Sustainable and secure

Transact in a controlled, finite environment on a permission-based ledger, which reduces vulnerability to cyberattacks as well as its environmental impact

Hybrid Settlement System

Choose how you would like to settle your payments - either gross or deferred net settlement, real-time or periodic. Express your settlement strategy and mitigate your liquidity risk.

Easy to join

Our platform technology is modular and structured with well-defined API saving you valuable time and money to market with straightforward deployment methods that make it easy for you to join.

We Deliver

Eternic is the latest addition to the Fintech Innovation ecosystem which is delivering the full benefits of emerging financial technologies. Our PSD2 and open banking platform, Neonomics, is already online and connecting a vast network of banks throughout Europe.

The synergy within this ecosystem allows Eternic to capitalize on proven implementation know-how, a network of connections, and experience working with and onboarding many financial institutions. The Eternic cross-border payment and settlement solution is scheduled to launch in 2019.

Since 2010, **our team** has been delivering successful payment solutions for companies such as Klarna Bank, Collector Bank, and Tandem Bank. We also bring experience in successful software development for streaming, online security, and visualization technology.

Eternic is the culmination of our desire to deliver the latest in technological advances to provide smart, creative, and customer driven solutions that revolutionizes industries from within.

Join Our Guide Group

Interested in joining our product guide group of financial institutions and banks involved with international payments and settlements. Help us shape the future by aligning your business needs with technological features.
